CUMULATIVE COVID-19 CASES AND DEATHS IN THE CENTRAL REGION

GOOGLE MOBILITY INDEX: RECREATION AND RETAIL TRAVEL IN THE CENTRAL REGION

Indicator Label: % increase/decrease in mobility compared to baseline; above baseline = red up arrow; below baseline = green down arrow.

ONE WEEK DIFFERENCE IN THE CENTRAL REGION

Sources: *NHSN, **DHSS (data lagged 1 week due to limited supply of testing components).

DHSS data shows change in totals; NHSN data shows average changes.

New admissions is a recently added NHSN measure, and the data are not yet available.

COVID-19 HOSPITALIZED AND VENTILATED PATIENTS IN THE CENTRAL REGION

Indicator Label: Green arrow if "Days of Consecutive Decline" is greater than or equal to 7; otherwise, no indicator. Note: Definition of consecutive 7-day decline is across the most current 7 days included in the report. Data includes both confirmed and suspected COVID-19 cases.

STATEWIDE AND REGIONAL VENTILATOR AVAILABILITY

	STATE		REGIONAL	
	% AVAIL	Total	% AVAIL	Total
Mechanical Ventilators	74% ↑	2,049	71% ↑	189

Ventilator availability indicator is based on a published online COVID-19-associated supply target of 22.66 vents per 100,000 population. <https://www.nsmcdicaldevices.com/analysis/coronavirus-ventilators-global-demand/>

STATEWIDE AND REGIONAL BED AVAILABILITY

	STATE		REGIONAL	
	% AVAIL	Total	% AVAIL	Total
Total Inpatient Capacity	34% ↑	18,446	14% ↓	1,710
Intensive Care Units	36% ↑	2,851	37% ↑	275

IP and ICU beds indicator is based on CDC Phases. Phase 1 (<80% full), Phase 2 (<75% full), Phase 3 (<70% full) = green up arrow. Red down arrows for everything else.

Data lagged additional 7 days due to limited supply of testing components.

NOTES AND DATA SOURCES

Notes: This dashboard, with a state and regional focus, along with the element of predictive understanding, serves as a tool for better awareness of the COVID-19 pandemic and intends to complement other available information currently used for decision-making. Because the data are reported in near real time, every effort has been made to ensure the completeness and accuracy of this data.

Cumulative COVID-19 cases per 100,000, cumulative cases and deaths and cumulative COVID-19 testing results sourced from the Missouri Department of Health and Senior Services WebSurv and global testing data. Daily testing per 100,000 and positivity rate targets sourced from the Harvard [Global Health Institute](https://www.hs-nlm.nih.gov/health/global-health-institute/). Displaying Cumulative COVID-19 Cases per 100,000 allows for the comparison of cases by county, region and state, by removing the population variance.

Reproductive Rates and Projected COVID-19 Hospitalizations are modeled by the Institute for Public Health at Washington University. The effective reproductive rate, R_e , represents the effective transmission rate for COVID-19. R_e calculations consider individuals with potential immunity as well as community wide preventative measures such as social distancing policies. Missouri's model uses a standard SEIR (susceptible, exposed, infectious, recovered) compartmental structure that is based upon a tool called LEMMA (Local Epidemiological Modeling for Management & Action), which was developed by experts from UMass Amherst, UC Berkeley, UCSF and WUSTL. The model focuses on COVID-19 hospitalized cases to directly address the question of hospital capacity and provide a more accurate picture of COVID-19's impact on the health care system.

Confirmed or Suspected Hospitalized and Ventilated Patients, New Admissions, Bed and Ventilator Availability, and PPE Availability sourced by the U.S. Department of Health & Human Services. HHS data is manually reported by hospitals and sourced weekly on Tuesday afternoons to reflect the previous week of data (Sun-Sat). Bed, ventilator and PPE data is averaged by reporting hospitals over the most recent seven days.
