### Offense / Incident Narrative

On Monday, November 11, 2024, at approximately 1041 hours, I was contacted by a member of the Missouri Information Analysis Center (MIAC) who advised personnel with the Hermann Fire Department were requesting assistance with a fire scene investigation regarding a commercial structure. I was provided an address of 220 East 1st St., in Hermann, in Gasconade County.

I arrived on the scene at approximately 1212 hours on November 11, 2024, and found the scene secured by personnel with the Hermann Fire Department, Washington Fire Department, and Hermann Police Department.

Through my scene investigation and subsequent interviews, this fire was classified as undetermined.

## Offense / Incident Report

Report Date <b>11/11/2024 1041</b>	Type of Incident	Complaint No. <b>24-00617</b>	Case Status <b>OPEN</b>
---------------------------------------	------------------	----------------------------------	----------------------------

### Supplemental Report

Supp. No. <b>0001</b>	Date / Time <b>11/11/2024 4:14 PM</b>	ID <b>1471</b>	Officer Name <b>Inv. Ryan Troske</b>
--------------------------	--	-------------------	---

#### FIRE SCENE

This fire occurred at a two-story, ordinary-construction, commercial structure, resting on a concrete basement. The front of the structure faced a northerly direction. The exterior walls were covered with brick, wood paneling, noncombustible metal sheeting on areas of the east and south walls, and cinderblocks on areas of the south and west walls, while the flat roof was covered with a black roll roofing, though the exact material could not be determined.

The electrical service was in operation at the time of the fire with service being supplied by overhead lines to the service entrance on the east side of the structure, and underground lines to a 2nd service entrance on the west side of the structure. The electric meters were clear of fire damage and, subsequently, were eliminated as possible causes of the fire.

The natural gas service was in operation at the time of the fire with service being supplied by underground lines to the service entrances on the west side of the structure. The gas meter and gas line were clear of fire damage, and, subsequently, were eliminated as possible causes of the fire.

The weather at the time of the fire as recorded by Weather Underground was 46 degrees, with 83% humidity, west winds at 5 mph, and fair skies.

#### Exterior Examination

A detailed and systematic examination of the structure's exterior began with the front, or north side of the structure, and continued in a clockwise direction. Please refer to the attached photographs for site-specific examinations and findings.

The north exterior wall showed heavy smoke and fire damage to the east half of the first floor. The area was comprised of wood framing, brick, large storefront windows, and a glass-filled metal framed door. The windows were completely busted out, and the wood framing showed heavy fire damage and charring throughout with most of the cribble studs having been consumed.

The area directly in front of the store was covered in fire debris and broken glass. Wood paneling next to the door showed heavy fire damage and charring throughout. Thermal damage was noted by the melting and peeling of paint and wall coverings, mostly to the area directly above the storefront. A

Case Status  
**OPEN**

smaller window next to the main storefront was also completely busted out and heavy smoke damage and deposition were noted above the window. Thermal damage was also noted by the bubbling of paint above the window. A window further west on the first floor was also busted out but was due to fire personnel during suppression activities and not a direct result of the fire.

The door on the west end of the north wall had been forced by fire personnel during suppression efforts. Inside the door was a staircase to the 2nd floor. Parts of the staircase were covered with collapsed debris and fire debris. The east end of the second floor showed heavy smoke damage and deposition throughout. Thermal damage was also noted by the peeling of wall coverings near the roofline, as well as oxidation and discoloration of the metal components near the roofline. The windows along the center of the second floor showed heavy smoke damage and deposition around the upper half of the windows, and extending up along the wall. Damage only spread minimally to the sides.

The far west window showed heavy smoke damage and deposition along the upper half of the window, extending up and out to and along the roofline. Thermal damage was also noted by the bubbling and peeling of wall coverings along the roofline area above the west window. All windows of the 2nd floor were busted out by fire personnel during aerial operations. Additional thermal damage was also noted to areas around the windows, demonstrated by the deformation of parts of the framing.

The east exterior wall showed spotted areas of heavy smoke damage and deposition around windows and vents located on the north half of the building, as well as along the roofline. Windows along the first floor were covered with wood planks, while others were covered with pegboard and sheetrock. Most of the first-floor windows had been breached by fire personnel during suppression efforts, exposing heavy fire-damaged wood and other interior contents. Heavy smoke damage and deposition were observed above and around the southern three windows. Thermal damage was noted to the south end of the wall, demonstrated by the discoloration of some of the metal wall coverings, and the peeling of some of the paint. An electrical service entrance was located on this side. The electric meter was clear of fire damage and subsequently was eliminated as a possible cause of the fire.

The south exterior wall suffered a major collapse on the west end, where approximately half of the west end had fallen around the structure. The area was covered in broken cinder blocks and metal sheeting. Thermal damage was noted by the oxidation and discoloration of the metal sheeting. Wood framing on the interior portion of the metal sheeting showed heavy fire damage and charring with mass loss. The west door showed moderate smoke damage and deposition along the upper portion of the door, extending up and out along the wall.

## Offense / Incident Report

Report Date  
**11/11/2024 1041**

Type of Incident

Complaint No.  
**24-00617**

Case Status  
**OPEN**

Heavy smoke damage and deposition were noted to the upper half of the east half of the wall, with damages mostly concentrated around the east doorway. Some of the wall coverings east of the east doorway were pulled by fire personnel during suppression activities. The exposed wood framing showed spotted areas of smoke damage and deposition. Thermal damage was noted by the peeling of wall coverings above the east doorway, as well as the discoloration of some of the metal wall coverings. Areas of heavy fire damage and charring were observed along the upper portion of the wall and roofline on the east half of the wall.

The west exterior wall suffered a major collapse on the south end, where some of the cinderblocks had fallen around the structure. The area was covered in broken cinder blocks and metal sheeting. Thermal damage was noted by the oxidation and discoloration of the metal sheeting. Wood framing on the interior portion of the metal sheeting showed heavy fire damage and charring with mass loss.

A natural gas line was observed next to the wall on the south end. The line was clear of any fire damage and subsequently was eliminated as a possible cause of the fire. Moderate smoke damage and deposition were noted along the upper halves of the windows around the center of the west wall with damages extending upward toward the roofline. A second electrical service entrance and natural gas service entrance were located on the north end of the west wall next to a rear entrance to the building. Both meters were clear of any fire damage and subsequently were eliminated as possible causes of the fire.

The adjacent doorway showed moderate smoke damage and deposition to the glass section above the door, and the ground in front of the doorway was covered in collapsed debris. A second staircase to the 2nd floor was visible through the open door and fallen debris was covering nearly the entirety of the stairs. A 2nd story window directly above the rear doorway showed smoke and thermal damage around and to the framing. Additional damages were noted along the roofline above the window. Bricks in the area had begun to shift and collapse.

The roof suffered a massive collapse into and around the structure and was partially consumed. The majority of the areas that remained intact showed heavy smoke and fire damage.

### Interior Examination

A detailed and systematic examination was conducted of the interior of the structure beginning with the least amount of damage and continuing to the heaviest. Please refer to the attached photographs for site-specific examinations and findings.

Reporting Officer **1471 Inv. Ryan Troske**

## Offense / Incident Report

Report Date  
**11/11/2024 1041**

Type of Incident

Complaint No.  
**24-00617**

Case Status  
**OPEN**

The interior examination began in the basement. The basement was filled with water due to suppression activities and was inaccessible.

The interior examination continued on the first floor with the coffee/break room located in the northwest corner along the north exterior wall. The coffee/break room showed moderate smoke damage and deposition across the upper 2/3 of the walls, across the ceiling, and on some room contents. Thermal damage was noted by bubbling and peeling of some of the wall and ceiling coverings. Some of the wall coverings on the south end of the east wall were pulled by fire personnel during suppression efforts. The exposed wall studs were mostly clear of fire damage, with only areas of small spotting of smoke damage and deposition observed.

There was no south wall to the room, leading into other areas of the building. Ceiling coverings on the far south end of the room had been pulled by fire personnel or consumed. The exposed ceiling joists and subflooring to the 2nd level showed heavy fire damage and charring throughout with mass loss evident. The ceiling on the south end had begun to collapse, and just south of the room, the area was covered in collapsed debris. Thermal damage was also noted by the complete melting of wiring insulation located within the ceiling area, as well as the oxidation and discoloration of metal light units and exposed metal wiring.

The cashier area of the antique store was located in the northeast corner of the structure along the north and east exterior walls. The cashier area showed heavy fire damage throughout. The room was covered in collapsed debris and fire debris. Thermal damage was noted by the melting and deformation of plastics and other items throughout, as well as the oxidation and discoloration of various metal items located throughout the room, such as the checkout area desk/counter, a support post behind the checkout area, and the structural I-beam the post supported.

The wood-slatted west wall showed areas of heavy fire damage and charring, with damages concentrated more to the northern half. Thermal damage was also noted by the melting and peeling of some of the wall coverings. The wiring located near the top of the wall showed melting to the insulation. The north wall was mainly made up of large storefront windows which were no longer intact and had broken out as a result of the fire. Heavy fire damage and charring were noted to the areas of wood framing, with mass loss throughout but more severe on the eastern half. Thermal damage was noted to the front door on the eastern half, demonstrated by the oxidation and discoloration of the metal framing.

Most of the wood framing on the east wall was completely consumed. What little remained showed heavy fire damage and charring throughout with significant mass loss. The brick wall showed heavy

smoke damage and deposition, more so to the upper half. The southern portion of the room had suffered a collapse and was partially consumed. Heavy fire damage was observed throughout the collapsed area, including building materials and room contents.

Ceiling coverings on the non-collapsed areas were pulled by fire personnel during suppression activities. The exposed ceiling joists and subflooring to the 2nd level showed heavy fire damage and charring throughout. The pulled ceiling coverings were scattered around the room and showed heavy thermal damage, demonstrated by the oxidation and discoloration of the metal sheeting.

The center area of the structure had suffered a complete collapse of the ceiling and 2nd floor and was partially consumed. The area was covered in mounds of collapsed debris. Building materials and contents showed heavy fire damage throughout. Thermal damage was noted by the melting and deformation of plastics and other materials, as well as the oxidation and discoloration of metal items located throughout the debris.

Exposed wiring was observed as insulation had completely melted off. Wood framing from walls and the ceiling showed heavy fire damage and charring throughout with significant mass loss to areas. Combustibles were at least partially consumed. The floor was covered in fire debris, collapsed items, and building materials, making the area difficult to traverse and examine.

The storage room was located in the southeast corner of the structure along the south and east exterior walls. The storage room showed heavy fire damage throughout, with damages increasing toward the ceiling. The floor was covered in fire debris and other collapsed contents and debris. Combustibles were at least partially consumed. Thermal damage was noted by the melting of plastics and other materials, as well as the oxidation and discoloration of metal items located within the debris.

Wall coverings throughout the room were mostly consumed or pulled by fire personnel during suppression activities. The exposed wall studs showed heavy fire damage and charring throughout, with damage increasing toward the ceiling level. Similar damage was observed to the exposed wall paneling, again with damage increasing toward the ceiling level. The entirety of the ceiling and roof had collapsed into the room and was partially consumed.

The furnace was located in the northwest corner of the room. The furnace was surrounded by collapsed debris and could not safely be examined from all sides. The furnace showed heavy smoke damage and deposition. Thermal damage was noted, demonstrated by the oxidation and discoloration of the metal casing and ducts, as well as the melting and deformation of some of the wiring insulation and other plastic components. The breaker panels were located on the north end of the east wall. The

breaker panels showed heavy fire damage throughout. Thermal damage was noted by the melting and deformation of plastic components and wiring insulation, as well as the oxidation and discoloration of the metal casing and exposed metal wiring. The area directly around the breaker panels showed heavy fire and thermal damage.

The southwest corner of the structure had suffered a total collapse of the ceiling and roof, as well as sections of the south and west exterior walls. The area showed heavy fire damage throughout. The floor was covered in fire debris and other collapsed contents and debris. Combustibles were at least partially consumed. Thermal damage was noted by the melting of plastics and other materials, as well as the oxidation and discoloration of metal items located within the debris.

Wood framing and other wooden items amongst the debris showed heavy fire damage and charring throughout with significant mass loss. Studs and framing on the west and south walls were nearly completely consumed. Collapsed roof coverings in and around the area showed thermal damage, demonstrated by the oxidation and discoloration of the metal sheeting. The southwest corner area showed heavy fire damage throughout, ranging from floor to ceiling level.

The interior examination continued on the 2nd level. The majority of the 2nd level had collapsed into the structure, and what little remained on the far north end was not accessible by either stairwell and had to be observed from within the structure on the main floor. Heavy fire damage was observed throughout what was visible on the 2nd floor. Wooden items, framing, and other building materials showed heavy fire damage and charring with significant mass loss observed across the east and west walls. Much of the 2nd floor contents had collapsed down onto the main floor. Thermal damage was noted by the melting and deformation of plastics and other materials, such as a large bathtub located near the center of the structure. Oxidation and discoloration were also observed to visible metal items and exposed wiring.

Due to the extent of damages, burn patterns observed, and collapse of most of the ceiling and nearly the entire 2nd level, an area of origin could not be established.

### Conclusion

Due to the evidence, burn patterns, and severity of damages noted above, including the collapse of a large portion of both the 1st and 2nd floors, and insufficient evidence to identify an ignition source or ignition sequence, a factual determination as to the cause of this fire could not be rendered. Therefore, this fire is classified as undetermined.

#### FIRE DEPT INFO

On Tuesday, November 11, 2024, upon my arrival on the scene, I made contact with Fire Chief Kevin Speckhals with the Hermann Volunteer Fire Department.

Speckhals advised they were dispatched at 0741 hours with apparatus on scene at 0747 hours. They had flames rolling out of the east windows on the first floor of the front of the building on arrival, with smoke billowing out of the first and second floors of the building.

2nd Assistant Chief Joe Scheer advised they had heavy fire and smoke from the front interior, and they were not able to make entry. A crew forced a locked door on the west side of the front of the building in order to take the stairs to the 2nd floor. Once on the 2nd floor, crews encountered smoke from floor to ceiling. With no visibility and high heat conditions, personnel retreated back down the stairs and exited the building.

Scheer advised the fire was attacked from the exterior utilizing two inch-and-three-quarter hoselines and a two-and-a-half-inch hoseline on the front side, and two inch-and-three-quarter hoselines and a two-and-a-half-inch hoseline at the rear of the building, all focused on the first floor. Scheer advised due to the fire and visibility conditions, personnel did not know when the interior of the building started to collapse.

Scheer advised aerial operations began at 0849 hours after the Washington Fire Department arrived on scene. The windows on the 2nd floor were busted out during aerial operations. Before this, no fire had been seen from the second floor. Once the windows were broken, fire began to show at all windows.

Scheer advised the back wall of the building and the rear portion of the west wall collapsed at approximately 1030 hours.

Scheer advised the windows on the first floor of the east wall were covered with sheetrock and pegboard. When the windows were breached by fire personnel, they had heavy fire rolling out.

Scheer advised a DVR system was removed from the first floor by fire personnel and placed in an apparatus on scene while personnel continued to battle the fire.

#### INTERVIEW

On Monday, November 11, 2024, I spoke with witness Jeffrey Meyer while on the fire scene. The following is a summary of the interview.

Meyer advised that he had dropped his daughter off at daycare at 0723 hours across town, drove to 1st St., and parked in front of the involved structure at 218/220 E 1st St. Meyer advised he did not see anything wrong, and noticed that the flatscreen TV inside the antique shop on the first floor was on and working as usual. Meyer walked over to the Stomp'n Grounds coffee shop located at 214 E 1st St., and was only there for around 5 to 10 minutes when someone rushed in saying there was a fire and to move his vehicle. Meyer advised he ran outside to move his car and observed smoke and flames rolling out the front left windows of the antique shop.

Nothing further was obtained from Meyer.

#### INTERVIEW

On Monday, November 11, 2024, I spoke with Scott Bringhurst, owner of the Hermann Attic Antique Mall, which occupied most of the first floor of the involved structure, while on the fire scene. The following is a summary of the interview.

Bringhurst advised he had been running his business since 2009. The business was operated under Lima Charley LLC, which he owned, and was insured through American Family Insurance. He was unaware of any electrical issues with the building or his shop. Bringhurst advised he paid the building owner Nicholas Renfroe \$3,275 a month in rent.

Bringhurst advised his employee clocked out the previous evening at 1720 hours. He had last checked his ring camera footage from the store logged at 1730 hours showing the lights still on, so the employee was still locking up and hadn't left the building yet.

Bringhurst advised there shouldn't have been any power to the rear portion of the building at the time of the fire, as they flipped the breaker to the rear of the building when closing each night.

Bringhurst advised he had approximately \$100,000 worth of retail in the store at the time of the fire.

Bringhurst advised he had a DVR system with 15 cameras set up inside the store. The fire department had cut the DVR box out and removed it from the building. Bringhurst advised the system was not connected to the cloud but as long as it was not too damaged, you should be able to connect the hard drive to a computer and pull the footage.

Nothing further was obtained from Bringhurst.

#### INTERVIEW

On Monday, November 11, 2024, I spoke with building owner and owner of the B&B business operated out of the 2nd floor Nicholas Renfroe while on the fire scene. The following is a summary of the interview.

Renfroe advised the building had been built sometime around 1900 and he had purchased it in December of 2021. It was a private sale from the previous owner, which was a five-year term, and he still owed approximately \$200,000 on the building. Renfroe advised he paid \$2,000 a month for the building.

Renfroe advised the building was powered by electric and natural gas. He was unaware of any issues with either. Renfroe advised natural gas was used for the water heaters, a furnace, and three fireplaces on the 2nd floor.

Renfroe advised after purchasing the building the 2nd floor was gutted and everything was professionally redone.

Renfroe advised he purchased the building for \$375,000 and he had put over \$800,000 into renovating the 2nd floor and getting everything needed to run his B&B business Dappleton Hotel.

Renfroe advised the building was listed under NIBE LLC, which he was the owner of, and Dappleton Hotel was operated under DAPS LLC, which he was also the owner of.

Renfroe advised the building and Dappleton Hotel were both insured by Nautilus.

Renfroe advised he had last been in the building the day prior from approximately 1130 hours to 1230 hours to check the hotel rooms on the second floor after guests had checked out.

Renfroe advised Scott Bringhurst, owner and operator of the Hermann Attic Antique Mall, had nearly the entire first floor, except for a small coffee/break room which was part of Dappleton Hotel, and the entirety of the 2nd floor was Dappleton Hotel.

Nothing further was obtained from Renfroe.

### EVIDENCE INFORMATION

During suppression activities, a DVR system was located on the main floor by fire personnel and removed by cutting all the attached wires. The DVR system was then placed into an apparatus on scene.

The DVR system was a Night Owl, model #: DVR-C50XFR-162-JF. The DVR system showed slight thermal damage to the front casing but appeared relatively unharmed.

Scott Bringhurst, the owner of the antique mall, also owned the DVR system and advised he had 15 cameras throughout the property. He advised they were motion-sensored cameras but they may have caught footage of the fire. Bringhurst advised the system was not connected to the cloud, but as long as it was operatable, it should only need to be connected to a computer in order to pull footage from the hard drive. Bringhurst gave verbal consent for me to take possession of the DVR system to attempt to obtain footage of the fire incident. Bringhurst also supplied a completed written consent form the following day on 11/12.

I collected the DVR system from the fire apparatus on scene and placed it in a large paper evidence bag, which was later filled out and sealed with evidence tape.

The DVR system remained in my possession until 11/19 when I traveled to Jefferson City and submitted the DVR system to the Missouri Digital Forensic Center (MDFC).

Once anything is heard from the MDFC, this report will be updated with an additional supplement.

#### INTERVIEW

On Monday, November 18, 2024, I spoke with witness Tarah Merrick on the phone. The following is a summary of the interview.

Merrick advised she was staying at the B&B over the coffee shop at the time of the fire incident. Her friend was the first to see smoke and notified her she believed there was a fire. Merrick advised she observed smoke coming out the back of the building and when going around to the front saw flames rolling out the front window. She told the coffee shop/B&B owner about the fire, who then went to get the owner of the involved structure who lived across nearby.

Nothing further was obtained from Merrick.

#### INTERVIEW

On Monday, November 18, 2024, I spoke with witness Christina Aversman on the phone. The following is a summary of the interview.

Aversman advised she was staying at the B&B over the coffee shop at the time of the fire incident. She was out back in the parking lot loading luggage into the car when she turned and observed smoke coming from the top middle area of the involved structure. She told her friend she thought the building was on fire. Aversman advised in less than a minute, smoke was coming out of the seams of the building and where it met the deli building next door as they were only separated by a couple of inches.

Aversman advised she then went into the coffee shop to get her friends and announce the fire. One of her friends went out front of the coffee shop and observed flames rolling out the front windows of the involved structure. Aversman advised it had only been a few minutes from when she first observed smoke from the back of the building.

Nothing further was obtained from Aversman.

#### FOLLOW UP

On Thursday, December 5, I met with Investigator Marcus Penn with the Missouri Digital Forensic Center to go over recovered footage from the DVR system salvaged from the fire scene.

Penn performed an extraction of the data covering the dates and times of 1630 hours on November 10th, 2024, through 0739 hours on November 11th, 2024. The system consisted of 14 cameras, however, they were not numbered in any particular order, and most could not be accurately placed as to their location within the Hermann's Attic Antique Mall. The cameras captured brief images every half hour but only captured video footage when motion was detected, rendering the footage broken up and choppy.

No one was captured inside the building after the last employee left at approximately 1740 hours on 11/10. No fire activity was captured on any of the cameras until approximately 0730 hours on 11/11, when some of the cameras captured light smoke up around ceiling level, traveling north toward the front of the building. No footage was observed showing where or when the fire first started.

At approximately 0737 hours, flames could be seen in the northeast corner of the building on the ceiling and around the display windows at the front of the store. The windows failed and smoke and fire began venting out of the front of the building.

Video footage provided an approximate time of fire activity, however, a fire origin and cause could still not be established. Due to the footage observed, the fire appears to have started up high at ceiling level, or somewhere between the first and second floors.

### EVIDENCE INFORMATION

On Thursday, December 5, I met with Investigator Marcus Penn with the Missouri Digital Forensic Center to go over recovered footage from the DVR system salvaged from the fire scene.

Following an examination of the footage, Penn supplied a thumb drive of the footage extracted which will be placed into evidence. Penn also released the DVR system back into my possession which will be returned to the owner Scott Bringhurst at a later date.
